*CME CREDIT POINTS APPLIED*

Welcome to a special event you will remember for a long, long time: An event that will showcase the marvels of current post-oncologic reconstruction. Mutilation, which was hitherto considered inevitable following extensive surgical resections, is now completely unacceptable.

Quality of Life has emerged as the most important determinant of success today. This is especially relevant in subsites such as the Head and Neck and Breast, and assumes equal importance in other areas such as skeletal and soft tissue malignancies.

The purpose of this meeting is to provide a glimpse into what can be achieved and imagined in the exciting arena of reconstruction and rehabilitation, resulting in vastly improved Quality of Life.

This meeting represents the continuation of a series of academic initiatives by the Sir H. N. Reliance Foundation Hospital & Research Centre, in collaboration with the MD Anderson Cancer Center, Houston, Texas, USA.

With a highly distinguished faculty from across the country and the USA, the scientific programme should be of interest to all practicing surgical oncologists and reconstructive surgeons. The clear focus of all sessions will be on optimizing quality of outcomes and will be presented in an integrated manner to highlight the importance of planning, teamwork and excellence.
